SUMMARY

Senior Solutions Engineer with **2+ years** driving pre-sales in **FinTech and Insurance** enterprise accounts, closing pilots that translate into production AI deployments. Built the **U.S. pre-sales motion from scratch** at an AI-native SaaS startup, owning technical discovery, demo engineering, and POC scoping across a pipeline of **30+ enterprise evaluations**. Combines a data-science foundation (shipped ML to production, maintained **5M+ record/day pipelines**) with modern GTM execution—**MEDDIC** discovery, outbound automation, and RAG-workflow architecture—to compress POC timelines and accelerate ACV growth.

WORK EXPERIENCE

Watermelon Software Inc.

Remote, CA

Sales Engineer (Pre-Sales)

Oct 2024 – Present

- **Established U.S. pre-sales motion** from zero as the first U.S.-based SE at a ~**\$5M ARR** AI-native reliability startup; built end-to-end GTM playbook (discovery templates, demo library, pilot runbooks) that enabled the sales team to run **30+ enterprise evaluations** with no prior U.S. infrastructure.
- Applied **MEDDIC discovery** across QA, IT, Security, and C-suite stakeholders at banking and insurance accounts; identified economic buyers and defined measurable success criteria that advanced deals through technical validation, **reducing average POC scoping time by ~30%**.
- Designed and delivered **30+ tailored demos** mapping platform capabilities to release-velocity, QA-efficiency, and production-risk KPIs; demo-to-pilot conversion rate held above **60%** across regulated-industry accounts.
- Architected a **production-grade outbound automation workflow** using **n8n + OpenAI API**: ingested ICP accounts, enriched decision-makers via enrichment APIs, generated hyper-personalized sequences, and surfaced pipeline summaries to Slack—**creating a repeatable path to qualified meetings** and consolidating multi-BDR activity into one visibility layer.
- Synthesized insights from **50+ prospect and customer interviews** into structured requirements documents; insights were adopted by Product and shipped as **3 roadmap features** tied to scalability, compliance controls, and cloud-deployment flexibility.
- Standardized **solution architecture documentation, pilot acceptance criteria, and handoff runbooks**; reduced time-to-first-value during enterprise rollouts and improved cross-functional alignment with Customer Success and Partner teams.

Watermelon Software Inc.

Remote, CA

Data Scientist

Sep 2023 – Oct 2024

- Shipped a **computer vision screen-classification model** (Python, PyTorch) into automated testing workflows; improved UI element detection accuracy by **20%**, directly expanding automation coverage and reducing manual QA overhead for enterprise clients.
- Co-developed a **test case prioritization engine** using historical execution signals and risk scoring (**SQL + Python**); reduced enterprise regression runtimes by **25%**, contributing to **40% faster test execution** in targeted workflows and improving release-cycle predictability.
- Prototyped **GenAI test-authoring workflows** using **LangChain + RAG** over product specification docs; reduced manual test-creation effort and accelerated release cycles—later became a key demo capability in pre-sales conversations.
- Built and maintained **ETL pipelines processing 5M+ daily testing records at 99.9% uptime**; developed predictive models with **85% accuracy** for system-vulnerability identification and partnered cross-functionally to productionize ML features in regulated enterprise environments.

Sway.AI

San Diego, CA

Data Consultant

Mar 2023 – Jun 2023

- Designed an **influencer-detection and sentiment-analysis system** using **NLP + social-graph analytics** on **10M+ social**

- posts**; improved sentiment classification accuracy by **30%**, enabling executives to reallocate marketing spend with data confidence.
- Built scalable **ETL pipelines (Python, SQL)** and **Tableau dashboards** surfacing campaign performance metrics; presented findings to client leadership, translating model outputs into actionable budget-allocation recommendations.

PROJECTS

SignalNote — Open-Source Customer Intelligence Tool (2025)

- Built ingestion pipelines for **CSV and Google Sheets**, clustered feedback with unsupervised ML for insight discovery, and shipped an interactive dashboard using **Supabase + OpenAI API**; demonstrates applied RAG and feedback-loop architecture directly relevant to enterprise SE workflows.

Personal Portfolio — Production Next.js Site (2025)

- Built with **Next.js + TypeScript**; includes contact API and content-ingestion layer. Achieved **Lighthouse scores 95–100** for accessibility and SEO. Deployed on **Vercel**.

SKILLS

Sales & GTM:	MEDDIC, Challenger Sale, value-based selling, technical discovery, POC scoping, pilot design, executive communication, stakeholder management, outbound automation (n8n)
Cloud & Architecture:	AWS (Lambda, S3, EC2), REST APIs, webhooks, event-driven architecture, CI/CD integration, Terraform (basic), Postman, Supabase, Vercel
Modern AI & Data:	Python, SQL, RAG validation, LLM workflow orchestration, LangChain, Hugging Face, OpenAI API, GenAI pipeline design, computer vision (PyTorch), ETL design, experimentation frameworks, ML model evaluation
Tools & Platforms:	n8n, Jira, Confluence, Tableau, Salesforce/CRM workflows, GitHub

EDUCATION

University of California, San Diego — Rady School of Management M.S. in Business Analytics · Academic Fellowship Recipient	Jul 2022 – Jun 2023
University of California, San Diego B.S. in Mathematics and Economics · Minor in Business	Sep 2018 – Jun 2022

CERTIFICATIONS

ServiceNow Certified System Administrator	Jan 2026
AWS Partner Accreditation (Technical)	May 2025
AWS Technical Essentials	Jun 2025
